SUMMARY

- Final-year Computer Engineering student with strong problem-solving skills and hands-on experience building scalable web applications using the MERN stack. Developed a full-stack project management system with task workflows, REST APIs, JWT-based authentication, and optimized MongoDB queries. Focused on writing efficient, maintainable backend code.

EDUCATION

LDRP Institute of Technology and Research, KSV University

B.E. in Computer Engineering

June 2023 - May 2027

Gandhinagar, Gujrat

PROJECTS

- **FINAL YEAR PROJECT MANAGEMENT SYSTEM** || *React.js, Node.js, Express.js, MongoDB*
 - Engineered a full-stack Final Year Project Management System with role-based dashboards for Students, Teachers, and Admins
 - Built RESTful APIs for project proposal submission, supervisor requests, progress tracking, and real-time notification management
 - Implemented secure authentication and role-based authorization using JWT for Students, Teachers, and Admin workflows
 - Developed Teacher Portal for reviewing project progress, managing assigned students, and accepting/rejecting project requests
 - Designed Admin Control Panel with full CRUD operations for user management, proposal approvals, and centralized file handling
 - Optimized MongoDB schema design and indexing for efficient data retrieval and scalable backend performance
- **GEMINI AI CHATBOT WEB APPLICATION** || *HTML, CSS, JS*
 - Developed an interactive AI chatbot interface inspired by Google Gemini using HTML, CSS, and JavaScript.
 - Integrated Open-Router API to generate AI-powered responses and simulate real-time conversational interactions.
 - Implemented chat history management using browser localStorage for persistent conversation storage.
 - Designed responsive user interface with dark/light theme toggle and modern chat layout.
 - Added features like file upload support, chat export, and message typing animation for improved user experience.
- **URL SHORTENER WEB APPLICATION** || *NODE.JS, JS, HTML, CSS*
 - Developed a backend service that converts long URLs into shortened links using Node.js HTTP server.
 - Implemented REST API endpoints to create and retrieve shortened URLs.
 - Generated unique short codes using crypto module and handled URL redirection.
 - Stored shortened links in JSON-based storage and implemented validation to prevent duplicate codes.
 - Built responsive frontend interface to submit URLs and display generated short links.
- **SNAKE GAME** || *HTML, CSS, JS*
 - Built an interactive Snake Game with dynamic movement and collision detection.
 - Implemented score tracking and high-score storage using localStorage.
 - Added pause/resume controls, timer functionality, and increasing game speed.
 - Designed responsive UI with light/dark theme toggle.

TECHNICAL SKILLS

Programming Languages: C++, Python

Web Technologies: HTML, CSS, Javascript, ReactJS

Backend: Node.JS, ExpressJS

Database: MongoDB

Core Concepts: Data Structures & Algorithms with C++, OOP, DBMS, OS

Developer Tools: Git & GitHub, VS Code, IntelliJ IDEA, Postman

ACHIEVEMENTS

- Solved 150+ problems on LeetCode ([krunalsinh.2005](#))
- Consistent problem-solving practice

CERTIFICATIONS

- Python for Data Science – NPTEL(IIT Madras)
